Siege of Loerchegg The siege of Loerchegg took place in the early stages of the Italian War of 1499. In 1499, the imperial forces of Holy Roman Emperor Maximilian I advanced on the south of Swabia, capturing the towns of Ostrach (March 17) and Bochlolt. He also captured several castles in the region. However, the imperial forces received significant resistance from the troops of the Landgraviate of Baden-Durlach in the south of the region. The Landgrave Johan the Elder was forced to come to terms on March 28, agreeing to pay a 500,000 gulden ransom for his eldest son Otto and two daughters. The delivery was to take place in Nürnberg on April 17; the same day as the imperial army's departure. The attack on Loerchegg by Landgrave Johan the Elder was prepared against this background. At the beginning of April, a small Imperial force attacked the region of St. Gotthard and Frankenhöfen. They captured St. Gotthard on April 1, but Frankenhöfen had already received its defenders, and there was a skirmish. On April 6, the Imperial army captured Frankenhöfen as well, and on the same day, they besieged Loerchegg. The troops of the Landgrave attacked the fortifications in the north on April 6, but due to resistance from the imperial forces, they were not able to lay siege to it. After the failure of the siege of Frankenhöfen, the Imperial army was forced to break off the campaign, so that its forces could be used against the imperial city of Nürnberg, and after its capture, to offer compensation for the ransom of the Landgrave's eldest son. To bolster Johan the Elder's forces, he sent his son Otto to Moravia in order to seize the town of Radkersburg, which fell to the imperial forces with little trouble.
